As explained in the last [blog.post <](https://plandora51897980.wordpress.com/2020/11/22/week-7-software-architecture-document-sad/)
[https://plandora51897980.wordpress.com/2020/11/22/week-7-software-architecture-document-sad/>](https://plandora51897980.wordpress.com/2020/11/22/week-7-software-architecture-document-sad/), we created our Software Architecture Document. We used the last week to improve parts of this document, including the UML Class Diagram and the Deployment.

In addition, there was some mentionable progress in development. For instance, it is now possible to sign up for new accounts and to create actual events. These events are also shown in the user's dashboard. A demo of the current state of development can be seen in [this video < https://www.youtube.com/watch?v=53HQLxpBXrQ>](https://www.youtube.com/watch?v=53HQLxpBXrQ).

Unfortunately, we could not get the Cucumber Tests running yet. We've invested a lot of time in this issue, but it is still not working appropriately. Since Cucumber seems to be used with Android **and** Kotlin only in a few cases, there is very little information available on the internet on this topic. That is why we will rather work with Espresso Tests. If you've dealt with this issue as well or even managed to get it to work, please let us know!

[UPDATE: Managed it! < https://www.youtube.com/watch?v=rS8s7lvGFGI>](https://www.youtube.com/watch?v=rS8s7lvGFGI)

Feel free to leave a comment! If you have any questions or suggestions, let us know!

Best regards

Plandora-Team
