This week's blog post is a little update on our project scope. Since we are slowly but surely nearing the end of our project, it was necessary for us to once again check our progress and redefine the scope.

Updated scope/final scope for the hand-in.

During the last weeks, while working on the Use Case “Notifications” <
https://github.com/Honrix/PlandoraDocumentation/blob/main/UCS/07_N

[otifications/Get%20Notifications.md>](#), we realized that we will not be able to finish this UC in the time we have left.

Although we are already able to receive FCM (Firebase Cloud Messaging) push notifications on our devices, these push notifications still have to be triggered manually instead of programmatically. As you can see in the Use Case Specification, this would be needed in order to schedule push notifications 2 weeks as well as 1 day prior to any event. Therefore, we decided to not implement the UC “Notifications”.
